Facility_Americans_With_Disabilities_Act_Compliance_Code	Business Rule	The default value of Facility Americans With Disabilities Act Compliance Code shall be "NEVL.	
Facility_Americans_With_Disabilities_Act_Compliance_Code_Derivation	Business Rule	The default value of Facility Americans With Disabilities Act Compliance Code is derived from the BEA attribute Real_Property_Facility_ADA_Compliant_Indicator	
Facility_Analysis_Category_Usage_Life	Business Rule	The Facility Analysis Category (FAC) code must determine the maximum useful life of each capital improvement that alters the original designed use of the facility.	
Facility_Book_Value_Amount	Business Rule	The facility book value amount must be the net amount at which a facility is carried in the financial records.	
Facility_Book_Value_Amount_Derivation	Business Rule	The Facility Book Value Amount is derived from the BEA attributes: Valuation_Amount [Valuation_Type_Code] [Real_Property_Facility_Identifier]	
Facility_Built_Date	Business Rule	Each facility will only have one Facility Built Date. Each Facility Built Date must be obtained from the legal agreement documenting the acquisition for each facility acquired by exchange or transfer. For each facility that is completed in multiple phases, the Facility Built Date for the facility must be equivalent to the RPA Placed In Service Date for the first phase of construction. If the Facility Built Date month is unknown, the default value must be "07" (July). If the Facility Built Date day is unknown, then the day value must be defaulted to "01" (one). When the Facility Built Date is exchanged between systems, the date must be transmitted in XML format (YYYY-MM-DD). The Facility Built Date shall not be later than the current date.	
Facility_Built_Date_Application	Business Rule	The Facility Built Date does not apply to capital improvements, renovations, or modernizations.	
Facility_Built_Date_Constructed	Business Rule	For each constructed facility, the Facility Built Date must be the same as the Real Property Asset Placed In Service Date for the facility.	
Facility_Built_Date_Derivation	Business Rule	The Facility Built Date is derived from the BEA attributes: Property_Action_Completed_Date [Property_Acquisition_Type_Code] [Real_Property_Facility_Identifier]	
Facility_Built_Date_from_SOR	Business Rule	When the Date Type equals 'RPA Placed in Service Date', 'Facility Built Date', 'Capital Improvement Placed in Service Date', or 'Asset Review Date', the information must be acquired from the real property inventory system of record.	
Facility_Built_Date_Multiple_Phases	Business Rule	For each facility that is completed in multiple phases, the Facility Built Date for the facility must be equivalent to the Real Property Asset Placed In Service Date for the first phase of construction.

Facility_Built_Date_Represent	Business Rule	The Facility Built Date must represent the earliest Real Property Asset Placed In Service Date.	
Facility_Code_Assigned	Business Rule	Each facility code must be assigned to a single site code which in turn, is assigned to a single installation code.	
Facility_Current_Period_Depreciation_Amount	Business Rule	The Facility Current Period Depreciation Amount is calculated from the Acquisition Original Asset Recorded Cost Amount and each capital improvement cost in accordance with FMR Volume 4, Chapter 6. If the life of the facility has been extended, then depreciate the book value and the capital improvement costs over the new remaining life. Otherwise, depreciate the book value of the facility over its remaining life and each capital improvement over its life. There must be a Facility Current Period Depreciation Amount recorded for each valid RPA Type Code value of "B" (Building), "S" (Structure), or "LS" (Linear Structure) entered for an asset that is not yet fully depreciated. The Facility Current Period Depreciation Amount must be recorded in US dollars and cents.	
Facility_Current_Period_Depreciation_Amount_Derivation	Business Rule	The Facility Current Period Depreciation Amount is derived from the BEA attributes: Depreciation_Set_Execution_Amount [Real_Property_Facility_Identifier]	
Facility_Estimated_Useful_Life_Adjustment_Quantity	Business Rule	The Facility Estimated Useful Life Adjustment Quantity value must be recorded in whole numbers only. The engineering community must determine if a capital improvement extends the useful life of a facility and, if so, the number of years the life is extended. This is typically done during the project planning and design phase.	
Facility_Estimated_Useful_Life_Adjustment_Quantity_Derivation	Business Rule	The Facility Estimated Useful Life Adjustment Quantity is derived from the BEA attribute Capital_Improvement_Facility_Estimated_Useful_Life_Adjustment_Quantity	
Facility_Estimated_Useful_Life_Quantity	Business Rule	The Facility Estimated Useful Life Quantity value must be reported in whole numbers. The original value for the Facility Estimated Useful Life Quantity must be taken from Facility Estimated Service Life in the UFC 3-701-xx, and based upon the RPA Predominant Design Use FAC Code value. There must be a Facility Estimated Useful Life Quantity recorded for each valid RPA Type Code value of "B" (Building), "S" (Structure), or "LS" (Linear Structure) entered. Facility Estimated Useful Life Quantity may only have a null value for FACs 1741-1744, 3902 and 7543.	
Facility_Estimated_Useful_Life_Quantity_Derivation	Business Rule	The Facility Estimated Useful Life Quantity is derived from the BEA attributes: Dimension_Value_Quantity [Dimension_Type_Name]	
Facility_Height_Quantity	Business Rule	The Facility Height Quantity must be recorded in whole numbers for each real property facility. There must be a Facility Height Quantity value recorded for each asset with a RPA Type Code value of "B" (Building) or "S" (Structure).	
Facility_Height_Quantity_Derivation	Business Rule	The Facility Height Quantity is derived from the BEA attributes: Dimension_Value_Quantity [Dimension_Type_Name]	
Facility_Height_Unit_Of_Measure_Code	Business Rule	There must be a Facility Height Unit of Measure Code recorded for each valid Facility Height Quantity value. The default value for Facility Height Unit Of Measure Code is "FT" (Foot).	
Facility_Height_Unit_Of_Measure_Code_Derivation	Business Rule	The Facility Height Unit Of Measure Code is derived from the BEA attributes: Unit_Of_Measure_Code [Dimension_Type_Name]	
Facility_Housing_Attribute_Code	Business Rule	There will be a Facility Housing Attribute Code entered only when the RPA Predominant Current Use FAC Code value is "7210" (Enlisted Unaccompanied Personnel Housing), "7212" (Enlisted Unaccompanied Personnel Housing, Transient), "7213" (Student Barracks), "7214" (Annual Training/Mobilization Barracks), or "7218" (Recruit/Trainee Barracks). The Facility Housing Attribute Code must accept null values. The Facility Housing Attribute Code must contain a valid value from the predefined pick list

Facility_Life_Determination	Business Rule	The useful life of each facility must be determined by its associated DoD Facility Analysis Category (FAC) code. This relationship is documented in the Whitestone Study.	
Facility_Module_Quantity	Business Rule	The Facility Module Quantity value must be recorded in whole numbers only. The Facility Module Quantity default value must be "0" (zero). When the RPA Type Code is equal to "B" and the RPA Predominant Design Use FAC Code value is equal to "7110, 7120, 7210, 7212, 7213, 7214, 7218, 7240, 7241, or 7250" the Facility Module Quantity value must equal zero (0).	
Facility_Module_Quantity_Derivation	Business Rule	The Facility Module Quantity is derived from the BEA attributes: Dimension_Value_Quantity [Dimension_Type_Name] [Real_Property_Facility_Module_Category_Code]	
Facility_Number	Business Rule	There must be a Facility Number recorded for each valid RPA Type Code value of B (Building) or S (Structure) entered. Uniqueness for the assignment of a RPUID for assets is determined by Real Property Site Unique Identifier, Facility Number or Land Acquisition Tract Identifier, and Disposal Date. To have a RPUID assigned by the RPUIR, the Service record must contain a value for either the Facility Number or Land Acquisition Tract Identifier. The RPUIR will return to the Service system an error message for any record received with a RPA Type Code value of B (Building) or S (Structure) that has a null Facility Number.	
Facility_Number_Derivation	Business Rule	The Facility Number is derived from the BEA attribute Real_Property_Facility_Number	
Facility_Number_from_SOR	Business Rule	Facility Number must be acquired from the real property inventory system of record.	
Facility_Number_Plan	Business Rule	The Facility Number must be assigned during the planning process.	
Facility_Physical_Quality_Rate	Business Rule	There must be a Facility Physical Quality Rate recorded for each valid RPA Type Code value of "B" (Building), "S" (Structure), or "LS" (Linear Structure) entered. The Facility Physical Quality Rate must be derived from the sum of all necessary restoration and modernization costs compared, on a percentage basis, to the Plant Replacement Value (PRV) of the facility. The Facility Physical Quality Rate must be greater than or equal to 0 (zero). The Facility Physical Quality Rate must be less than or equal to 100 (one hundred).	
Facility_Physical_Quality_Rate_Derivation	Business Rule	The Facility Physical Quality Rate is derived from the BEA attribute Real_Property_Facility_Physical_Quality_Rate	
Facility_Physical_Quality_Rate_from_SOR	Business Rule	Facility Physical Quality Rate must be acquired from the real property inventory system of record.

Linear_Structure_Module_SEG_X_Module_Number	Business Rule	Each linear structure segment will be assigned its own module Seg X which contains the segment specific attributes of each segment of the total linear component of a network facility. Renovation - Renovations can occur in one of two ways: an entire segment is renovated or a part of a segment is renovated. a. If a renovation involves all or part of a single segment, the affected segment's data attributes will be adjusted accordingly with the cost entered as an improvement in the RPI. The RPI would have the capability for many such entries over the life cycle of the system. b. If a renovation project affects multiple segments, each segment will maintain its Seg X module and the replacement date, amount of segment replaced, and the cost would be entered into the appropriate real property asset record as an update to its attributes. The cost entered for each segment would be prorated based on linear feet of replacement or renovation in each segment. Acquisition - any linear structure or non-linear facility (structure or building) acquired in the future will be entered into the RPI in segments based on the rules above. Each subsequent segment (linear) or node (non-linear) will be assigned its own Seg X module of a real property asset record. Disposal - If a segment or group of segments is disposed of, then the Seg X module(s) and attributes of the module(s) will be updated. This is also applicable for partial segment disposal. Expansion - if a segment is expanded and this expansion does not create another segment based on the rules above, then the old Seg X module will still apply and the attributes will be updated. If a new segment is required due to this expansion then the new segment will be assigned its own Seg X module.

Profit_Ceiling_PDS	Business Rule	<p>A Fixed-price incentive (firm target) contract specifies a target cost, a target profit, a price ceiling (but not a profit ceiling or floor), and a profit adjustment formula. These elements are all negotiated at the outset. The price ceiling is the maximum that may be paid to the contractor, except for any adjustment under other contract clauses. When the contractor completes performance, the parties negotiate the final cost, and the final price is established by applying the formula. When the final cost is less than the target cost, application of the formula results in a final profit greater than the target profit; conversely, when final cost is more than target cost, application of the formula results in a final profit less than the target profit, or even a net loss. If the final negotiated cost exceeds the price ceiling, the contractor absorbs the difference as a loss. Because the profit varies inversely with the cost, this contract type provides a positive, calculable profit incentive for the contractor to control costs.</p> <p>(b) Application. A fixed-price incentive (firm target) contract is appropriate when the parties can negotiate at the outset a firm target cost, target profit, and profit adjustment formula that will provide a fair and reasonable incentive and a ceiling that provides for the contractor to assume an appropriate share of the risk. When the contractor assumes a considerable or major share of the cost responsibility under the adjustment formula, the target profit should reflect this responsibility.</p>

Real_Property_Unique_Identifier	Business Rule	<p>Each real property asset in which the DoD has a legal interest must be assigned a Real Property Unique Identifier (RPUID).                      A RPUID must never be duplicated or reused to represent a different asset than that to which it was initially assigned.                      Each structure, facility or other footprint-type (non-linear) asset must be assigned its own RPUID and have its own real property asset record.                      A new RPUID and asset record must be created for the portion of a real property asset being transferred within the DoD.                      The portion of the real property asset that remains retains the original RPUID and asset record. Its attributes must be updated.                      Each individual unique real property asset within a lease or occupancy agreement must be assigned a RPUID.                      The split of a land parcel (generally by disposition) must result in the creation of a new asset record with a new RPUID being assigned to the disposed of portion.                      Each short-term lease or assignment authorized under real property acquisition law or regulation must be recorded in the real property inventory and assigned an RPUID.                      A new asset record must be created in the real property inventory for an ingrant of property rights to a DoD entity from a non-DoD entity and must be assigned a new RPUID unless the ingrant is a renewal (with no gap in time) or a sublease of space already inventoried.                      A RPUID must be assigned when: (a) an acquisition contract, (land purchase, construction, or design-build effort), is awarded, (b) ownership of an asset is initially transferred into the Military Department/Washington Headquarter Service (WHS), (c) a leasing contract is awarded, (d) an asset is permitted from another government agency, (e) a license agreement is executed, (f) a Status of Forces Agreement (SOFA) is negotiated and signed, or (g) an easement is negotiated and signed.                      When the transfer of real property within DoD results in the splitting of a site or asset, the transferring activity retains the original RPSUID/RPUID and accomplishes the necessary adjustments to the asset's attributes. The receiving activity will process the transferred assets as new assets and perform the necessary acceptance to add it to their real property inventory. In the case of land, adjustments and recordation of new deeds may be required, especially where restrictions are involved.                      The RPUID must remain the same for an expansion or contraction of a facility, land, or leased space.</p>
